

SECURE® NO-BITE BED BUG KILLER

KILLS BED BUGS FASTER AND LASTS LONGER THAN LEADING POISONS

Secure® no-bite Bed Bug Killer represents a new approach to killing bed bugs that is both safe and effective. Bed Bugs have developed a strong resistance to poisons that have been employed for decades. DDT, for example, is no longer that effective as the insects have developed a genetic mutation that protects them from allowing this and other poisons into their neuro-system.

Secure® no-bite Bed Bug Killer uses plant based active ingredients in concert with synergistic compounds that prohibit the bug from using the defense mechanism(s) that have enabled protection from DDT and the family of pyrethroids often used in other sprays.

Equally important to being effective in killing the bugs, is the fact that this product can be used around pets and children without fear of neuro-toxin exposure.

Areas sprayed can be used immediately after spraying. The formula has undergone extensive university testing for both duration and efficacy in killing bed bugs. One of the leading sprays now on the market was compared head-to-head with Secure® no-bite Bed Bug Killer and the duration of 100% kill for Secure® no-bite Bed Bug Killer was 5 times the other leading brand using the poison Cypermethrin.

Extensive University testing on live bed bugs has recently confirmed the resistance developed to pyrethroids. In addition to not being as effective, the **evaporation rate of the leading brands** renders them completely ineffective after a few short hours. No bed bugs survived after 48 hours in areas treated with Secure® no-bite Bed Bug Killer. Eighty percent (80%) of the Secure® no-bite Bed Bug Killer formula remained after 96 hours in an open-air environment.

Treat mattresses, base boards, and any cracks or crevasses with the crystal-clear Secure® no-bite Bed Bug Killer spray with confidence in both its effectiveness and safety. The world has recently experienced a rapid uptick in bed bug infestations, especially in hotel environments. **Commercial foggers are ideal for the employment of Secure® no-bite Bed Bug Killer.**

The summary of a recent University Study reads: “compared to the pyrethroid pesticide.....“SECURE® NO-BITE BED BUG KILLER HAD A HIGHER KILLING RATE AND A MUCH LONGER EFFICACY AT KILLING BED BUGS PERMANENTLY.”
